

## OSTEOPOROSIS

<b>Clinical Diagnosis</b>	<ul style="list-style-type: none"><li>- Osteoporosis itself doesn't have any symptom</li><li>- Symptoms develop once the fragility fracture occurs</li></ul>
<b>Investigation</b>	<ul style="list-style-type: none"><li>- Plain X-ray of spine</li><li>- Dual energy X ray absorptiometry (DXA) BMD</li><li>- Renal function test</li><li>- Calcium</li><li>- Albumin</li><li>- Phosphorus</li><li>- Urinary calcium level</li><li>- QCT (quantitative computer tomography)</li><li>- Quantitative Ultrasound</li><li>- Biochemical markers of bone resorption (increased urinary excretion of C- telopeptides)</li><li>- Vit D level</li><li>- Testosterone level</li><li>- Urinary free cortisol</li><li>- Serum protein electrophoresis</li></ul>
<b>Treatment</b>	<ul style="list-style-type: none"><li>- Surgery -Vertebroplasty, Open surgical spinal stabilization, Kyphoplasty</li><li>- supplementation and bracing</li><li>- Pain control- Bed rest , Analgesics, Brace</li><li>- Antiresorptive agents- Bisphosphonates</li><li>- Estrogen analogs- Raloxifene</li><li>- Calcitonin Bone anabolic agent -Teriparatide</li><li>- Calcium salts</li><li>- Sodium fluoride</li><li>- Nutrition Calcium -Vitamin D, Vitamin K ,</li><li>- Exercise - Aerobics</li><li>- Weight bearing Resistance exercise</li></ul>
